GET MORE VALUE WITH SAGE FAS SUPPORTPLUS

Protect your investment and get the most value from your software. With Sage FAS SupportPlus, you can get product updates, discounts and value-added benefits, including expert, toll-free telephone support and 24-hour Web access to FAS SupportPlus Online.

FAS Asset Inventory provides complete fixed asset inventory tracking and reconciliation capabilities for Sage MAS 90, Sage MAS 200, and Sage MAS 500 ERP systems. Using state-of-the-art bar code technology, including Palm OS and Windows Mobile devices, FAS Asset Inventory creates and tracks physical inventories of assets quickly and efficiently—helping companies gain tighter controls over their fixed assets.

With FAS Asset Inventory, you'll have complete confidence in the accuracy of your fixed asset data. Because FAS Asset Inventory simplifies the asset inventory process, you'll also have more time to focus on patterns of loss, theft and misallocation, and implement loss prevention policies.

With seamless integration to FAS Asset Accounting, FAS Asset Inventory performs the physical inventory reconciliation process on-screen with existing asset data. Fixed asset data can also be collected using a bar code scanner and labels, and then matched up to financial records where discrepancies are identified. You're then prompted for decisions about discrepancies and can select automatic updates of your financial records.

Maintaining accurate physical inventories is essential to safeguarding fixed assets. The enforcement of loss prevention policies is aided further with the Check-In/Check-Out feature. You can constantly monitor mobile assets with this feature that shows who has possession of important assets, where they are, when they're scheduled to return and when they're overdue.

Having concise, up-to-the-minute records on such valuable items as laptop computers, cellular phones, PC components, medical equipment, and important files will significantly reduce your asset replacement costs. When combined with FAS Asset Accounting and the rest of Sage MAS 90, 200 or 500, FAS Asset Inventory creates a powerful accounting management system to track your organization's fixed assets better than ever before.

Sage MAS 90, 200, and 500

FAS Asset Inventory

"Since Sage FAS is such a versatile product, we were able to perform a dynamic inventory of all the hospital's existing assets with hand-held scanners, reconcile that count, and establish policies and procedures for future fixed asset tagging in a matter of months."

Suzanne Pedone, President
IMSolutions.net

Great Scalability

Enhanced history tracking allows capture of critical "before and after" asset conditions. Seamless integration with FAS Asset Accounting can perform physical inventory reconciliation with existing asset data.

Supports Two Inventory Types

FAS Asset Inventory can handle baseline inventory—to add new assets, and dynamic inventory—to verify any data on existing assets.

Remote Computing

Although FAS Asset Inventory supports industry-leading bar code readers, Windows Mobile and Palm OS devices make it easy to perform inventories with less expensive bar code readers containing more memory. The system can also track assets at remote locations, where inventories can be conducted by exchanging data via e-mail attachments.

Multi-site Asset Inventory

This module provides the ability to conduct multiple asset inventories concurrently at distributed sites and reconcile the data at one central location.

Import/Export Helper

The Import/Export Helper allows you to import data from or export data to the most popular spreadsheet and applications.

Virtual Reader

On-screen Virtual Reader lets you perform a test inventory—and even add assets—before you invest in hardware.

Check-In/Check-Out

Check-In/Check-Out feature with a Check-Out History constantly monitors assets on the move.

Viewing Options

To optimize flexible fixed asset management and fast navigation, you can quickly switch between Detail View and Group View.

Detail View

Asset Detail View provides complete information including property type, class, acquisition date, supplier, location, GL asset account, accumulated and expense account numbers, custodian and more.

Group View

Customize your Asset Group View with drag-and-drop convenience—freeze "identifier" columns, display or hide columns to view the precise information you want, in the order you want to see it—all while saving your custom settings automatically.

Asset Management Tools

Groups, Templates, SmartLists and Search-and-Replace features provide powerful asset management and streamlined inventory methodologies.

Easy Access

Asset tabs allow instant access to Asset History, Images and custom online Notes.

Smart Fields

Fifty-one fully customizable fields provide the ability to control data entry, notes and image support to describe each asset record.

Analyze Asset Data

Track fixed assets better than ever before, investigate lost or misplaced items, and document inventory reconciliation with information-packed reports. Reports can be run on any asset group, sorted by any field desired, and printed in your choice of portrait or landscape modes.

Standard and Custom Reports

A comprehensive selection of reports includes reconciliation, summary, past due, detail, exception, and check-in/check-out. You can also create custom reports through the Report Helper link to Crystal Reports.

Online Help

Instant context-sensitive online Help is always available. Furthermore, customizable help for online corporate guidelines can be added easily.

Technical Support and Updates

A FAS SupportPlus membership provides access to toll-free phone assistance, automatic free system enhancements and updates, automatic tax law updates, 24-hour access to FAS SupportPlus Online and a wide array of other privileges and value-added benefits.
